

## **DAY -16 , DAILY REPORT, 29 -11 -2021 (MONDAY)**

Today, i got some new experience, when i wake up in the morning, it gives me a positive impact , what all i can do on this day, and cab went, and i came to the office. And the morning session was as usual. It was good. and I have gone through a book called Extreme ownership. The continuation of the foreword is that all of their stories have reinforced what we learned in the seal teams. Leadership is the most important thing on the battlefield and the principles of good leadership do not change regardless of the mission, the environment or the personalities of those involved. We worked with the division of a construction company that faced the grim possibility of shutdown due to systemic safety problems. But once its employees implemented extreme ownership. The division not only solidified their right to operate, but it also earned a top position in safety at the company. They have helped companies streamline their manufacturing process and they are using young minds to do the projects under their budget. They have egos and accept the blame for the difficult relationship, and they repair the relationship and

regain the trust of their leaders. A number of school teachers, educators, and coaches have told us how the concept of this book has made us better. We've heard from spouses who tell us how extreme ownership saved their marriage. Once they stopped pointing fingers and casting blame on their wife or husband, they were able to look inwardly at what they could take ownership of to produce a better outcome. As a result, their relationship was repaired and strengthened. To see such far-reaching, extraordinary impact is deeply meaningful to us. We wrote this book to truly help others - leaders, and aspiring leaders - to be better; helping others live better is the combat that who gave their last full measure. We owe them everything. The preface was that plenty of glorified war stories start like this. In the seal we make fun of those who tell embellished tales about themselves. A typical war story told is the jest about something a seal did usually begins like this, this book meant to be an individual's glorified war story, as we refer to our professional warfare community simply has the teams we call ourselves "team guys". this book describes how seal combat operations and training through our eyes from our individual perspectives- and applies our experience to leadership and

management practices in the business world. Chris Kyle, the seal sniper and point man in the task unit browser. He played a part in the combat of this book, as did a host of other teammates who, though deserving of recognition, remain out of the spotlight. Far from being alone, the combat scenarios describe how we confronted obstacles as a team and overcome those challenges together. After all, there can be no leadership where there is no team. That's all for today. Thank you.
