

## **DAY -24, DAILY REPORT, 09 -12 -2021 (THURSDAY)**

Today, i got some experience, in gaining some knowledge about how to write flowchart and algorithm in the prime numbers are called natural numbers , that are only divisible by 1, in other words, prime numbers are positive integers with exactly two factors, 1 and the number itself, some of the prime numbers 2, 3, 5,7,11,13, etc. always  $2 \times 5 = 10$ , as well as by (1 and 10). This property of being prime is called primality. A simple but slow method of checking the primality of a given number  $n$ , called trait division, tests whether  $n$  is a multiple of an integer 2 and  $(n)$  of square root. Faster algorithms includes the miller - rabin primality test, which is fast but has a small chance of error, and the AKS primality test, which always produces the correct answer the chapter 2 from extreme ownership no bad teams, and only bad leaders in leif babin the coronado, california : basic underwater in demolition/ seal training. They shivered from the cold ocean water and cool wind of the southern california night. The students moved with the aches and pains as only those who have suffered through seventy two hours straight of nearly nonstop physical exertion can be exhausted over the previous three days they had slept for less than one hour total. This class had started basic underwater and yet most of those young men had surrendered to the brutal challenge, run the bell three times - the signal for DOR, or drop on request and walk away from their dream of becoming a seal. They had quit. Hell week had already demonstrated adequate fitness to graduate. It was

not the physical test but a mental one sometimes, the best athletes were from innovation and communication with the team. Such training graduates men who were not only physically tough but who could also out - think their adversary. Now I wore this very beach. We began our hell week with 101 students. When we finished only 40 of us remained. Some of the most through realized physically much further and exhaustion of days without sleep - precisely what he'll week was designed to do. Now they wore the blue and gold Iraq shirt of a seal instructor. For lowing combat and they was a assigned seal training center and there was the every evolution was a competition and it through realized we could push ourselves mentally and physically much further than most ever thought possible through the pain, misery, and exhaustion of days without sleep - precisely what hell week was designed. And now I wore the blue and gold shirt of a seal instructor. I was assigned to our naval special warfare training center to instruct the junior of the office in charge of this hell week shift. My job was to oversee the crew of bud/s instructors who ran the training. The instructors were experts at their jobs of putting these students to the test. The buds students were grouped into teams - boat crews of seven men, established by height. Each seven - man boat crew was assigned an IBS - inflatable boat, small. An Ibs was small, that's all about today's report, thank you.
