

DAY - 31, DAILY REPORT, 20 -12 -2021 (MONDAY)

Today, I had an experience. When I woke up in the morning it gave me a positive vibe, and the cab came to the apartments, and I went to the office. Then I read the book called extreme ownership in chapter five. The clock was ticking and every second counted. As seals, we often protected the troops in the streets with our snipers and machine gunners in a type of operation we called “sniper overwatch”. By taking the high ground in buildings and positioning seal snipers they could do their best to observe and engage the substantial risks from the U.S. and through the battles raged around them, the hundreds and thousands of civilian where lived in the city and on one particular operation, the team building dog has the dangerous combat operations, and the commander has the seals and we loved them for it. And on the particular cordon and the task unit bruiser has the positions and dangerous ramadi streets. And this urban zone has the straight out and burnt out of the streets, and the seal shooters a couple of our iraqi unbolted from the inside of the house provided a decent view from an exposed balcony. And they pushed everyone in the place, the rest of the team in positions and soon the first rays in the nasty neighborhood, and the OP2 could hear and observe in the enemy where it remained a quiet leadership dilemma. With everything the consensus. Everybody knew that they relayed the information and with everything and walked away from the wanted gun light and

every gate, door, and alleyway from the past parked cars and piles of crash and every rooftop, balcony, and the upstairs of the window each presented inflict wounds. Our tactic for above trained and we have four elements in this way utilizing the cover etc. and it was a rude awakening for me. I had become so immersed etc. while loop how it works The while statement evaluates the expression before each iteration of the loop. If the expression evaluates to true, the whole statement executes the statement. If the expression evaluates to false, execution continues with the statement after the while loop. The while loop evaluates the expression before each iteration, therefore, the while loop is known as a pretest loop. For this reason, it is possible that the statement inside the while loop is never executed. The purpose of a while loop is to execute a statement or code block repeatedly as long as an expression is true. Once the expression becomes false, the loop terminates. After that i have read again called extreme ownership **PART -II - LAWS OF COMBAT - CHAPTER SIX - SIMPLE** - Jocko willink - A massive explosion shook the walls of the building in the middle of the combat outpost (COP) falcon and insurgents had lobbed with 120mm, and it has each massive projectile carried out the causing catastrophic and he has the roof in the building the night before, and it was a grim reminder and had inserted from U.S. marine corps small unit riverine, and has the areas of ramadi, and they had been interaction with the intermittent small arms and note that is slowed down the operation. But building the combat outpost in enemy territory was only the beginning

and the troops had to go out and into the neighborhood surrounding the COP. They had to conduct a type of operation into the enemy and a U.S .army officer gave advice to the Iraqi soldiers and so i assigned a small group of our seals to accompany them and his iraqi soldiers and there would be nothing easy or benign, and the U.S.soldier and the intense street fighting in the panty them and as a command
