

MY INTERNSHIP EXPERIENCE IN SURFBOARD PAYMENTS OR CORE ILLUSTRIO COMPANY

From the internship or mentorship training program starting from 08 -11 - 2021 (monday) to extended date of my internship. On my first day of my internship I gained a lot of experience from the employees and the management and team. After that i learned a lot of good things and interactive culture talks etc. after that i had an experience on how to install the gnome software and install and reboot the system. After that I have seen some different cultures and different languages etc. I have learned how to fill out the agreement form etc in this internship. Everyone in this start up company has the different role and different types of languages they speak etc. after that the session was very informative and good to my knowledge. The people who work in this company have an engineering and non - engineering background. Koushik has given some clear understanding about the problem solving concept, and algorithms. And Abraham said some basics about the programming language and how it works. After that I have learned some experience with my mentor Abin, he said that how the loop works, and you want to set a value in life and purpose in life etc. after that i talked at most ten minutes with askin, he has said about to set a goal and pray to god and put some effort whatever positive things u have move on he said. After that from the company side they are helpful and supportive in all kinds of good and bad things in life and my career, thank you for this

internship training, it gives me a good exposure and good knowledge , thank you that's all about my internship experience.
