

## **DAY - 33, DAILY REPORT, 22 - 12 -2021 (WEDNESDAY)**

Today, i got an experience, when i woke up in the morning it gives a positive vibes and the cab came to the apartments i went to the office or company, it gives me a good day to sit in the company and the task given by the mentor abin, he said that to print 1 to 10 numbers in while loop using javascript ? and the answer is to type the coding called `<DOCTYPE html>` means that all html documents must start with a `<!DOCTYPE>` declaration. The declaration is not an html tag. It is an “information” to the browser about what document type to expect. In html 5, the declaration is simple. The second code is the `<html>` tag is commonly defined as a set of characters constituting a formatted command for a web page. At the core of the html, tags provide the directions or recipes for the visual content that one sees on the web. Third tag represents the `<body>` tag defines the document's body. The `<body>` element contains all the contents of an html document, such as headings, paragraphs, images, hyperlinks, tables, lists etc. the `<script>` tag is used to embed a client side script (javascript). The `<script>` element either contains scripting statements, or it points to an external script file through the src attribute means the process of the html src attribute is to specific a url for an external file or resource. HTML src attribute supports frame, iframe, img, input and script elements. And the fourth code is to check the condition whether it is true let `i = 0`; after that i will type the

condition while loop ( $i < 11$ ) if it is true condition, the statement will execute if else statement if(  $(i \% 2) == 0$ ) after that it will execute the document.write ( $i + \text{"The number is even number"} + \text{'<br>'}$ ); if the condition is false it will print ( $i + \text{"The number is odd number"} + \text{'<br>'}$ ); and after that it will close the syntax called `</script>`, `</body>`, and `</html>`. After that i will read the book called extreme ownership continuation to the chapter six Jocko willink - A massive explosion shook the walls of the building in the middle of the combat outpost (COP) falcon and insurgents had lobbed with 120mm, and it has each massive projectile carried out the causing catastrophic and he has the roof in the building the night before, and it was a grim reminder and had inserted from U.S. marine corps small unit riverine, and has the areas of ramadi, and they had been interaction with the intermittent small arms and note that is slowed down the operation. But building the combat outpost in enemy territory was only the beginning and the troops had to go out and into the neighborhood surrounding the COP. They had to conduct a type of operation into the enemy and a U.S .army officer gave advice to the Iraqi soldiers and so i assigned a small group of our seals to accompany them and his iraqi soldiers and there would be nothing easy or benign, and the U.S.soldier and the intense street fighting in the panty them and as a command, thank you, that's all for today.
