

DAY - 30, DAILY REPORT, 17 - 12 - 2021 (FRIDAY)

Today, I had an experience. When I woke up in the morning, it gave me a positive vibe, and the cab came to the apartment and I went to the office. In my first session with mentor Abin, he has given me some tasks. While I have not completed the task till now, I want to complete it by the end of the internship. After that I have read the book called extreme ownership part one - chapter four Energy tracer rounds has the overhead as I raced up in the tactical operations center (TOC) building where our camp was under attack. The shooting started, and my helmet and rifle. The soldiers across the river were returning fire with a vengeance, with naval seal personnel were on the roof of stop M4 rifles. Others M79 and M48 and M46 belt -rays of the 40MM illumination round up. The sunni jinadi militants were far more capable than those I had previously had stood fast and returned fire with deadly accurate machine gun fire of their own, The marines and soldiers. When the unit arrived, and they were sent to camp Corregidor was owned and operated by the U.S. ARMY 101st airborne division first battalion and that was complemented with a genuinely, kind and easygoing attitude, the colonel expected the highest level of discipline from this ego clouds and disrupts everything and “remember it’s not about you”, I continued. It’s not about you about the drilling superintendent. It’s about the mission and how best to accomplish it. With that attitude exemplified in you and your key leaders, your teams will dominate. After that I have

continued to do the work etc. after that I have learned about how the while loop works. The while statement creates a loop that is executed while a specified condition is true. The loop will continue to run as long as the condition is true. It will only stop when the condition becomes false. JavaScript supports different kinds of loops: for - loops through a block of code a number of times. The example of a "While" Loop is used to repeat a specific block of code an unknown number of times, until a condition is met. For example, if we want to ask a user for a number between 1 and 10, we don't know how many times the user may enter a larger number, so we keep asking "while the number is not between 1 and 10". The JavaScript while statement creates a loop that executes a block of code as long as the test condition evaluates to true The while loop evaluates the expression before each iteration, therefore, the while loop is known as a pretest loop. After that I have continued to read the book called extreme ownership. In part two - chapter five the title of the chapter name is cover and move it has the south - central ramadi, iraq: covering the blank . and rest will be continued in the next report or book report, that's all for the day. Thank you.
